Subject: 3M AASD: 3M™ Paint Protection Film Product Transition Extension

Dear 3M Customer,

In our ongoing effort to strengthen our 3M Paint Protection Film portfolio, we recently informed you that the following products have been identified to be discontinued and transitioned by Q2, 2024. This is part of our larger global strategy for Paint Protection Film which considers raw material availability, capacity, production quality, service, and supply continuity.

The following products will transition to our global portfolio version.

| Current Product | Transition to Global Portfolio Version |
|-----------------------------------|---|
| 3M™ Paint Protection Film PU8591E | 3M™ Paint Protection Film PU8591US |
| 3M™ Paint Protection Film PU8592E | 3M™ Paint Protection Film PU8592US |

In an effort to allow our customers additional time to prepare, we are extending the transition to **Q4 2024** for the above products. The target date to transition is **October 1, 2024**.

The last shipments can take place until end of December 2024 for residual supplies. If there are special circumstances like End of Programs or Spare Parts required in 2025, we will follow up with you case by case.

The transition timeline of **Q2 2024** does not change for PNUE9260/PNUE9000 products.

As always it is up to the end user to determine whether a product is suitable for a particular application. We value your business and want to thank you for your continued partnership with 3M.

If you have any questions or need assistance, please contact your 3M Sales Representative.

Warm Regards,

Mitch Lintjer
