

## Environmental Policy of Röckelein GmbH

Röckelein GmbH is committed to a holistic and systematic approach to environmental protection throughout the entire value chain. Our actions are based on an integrated environmental management system aligned with international standards and focused on continuous improvement.

We continuously assess and monitor the environmental impact of our products, services, and processes. Through targeted measures, we minimize environmental burdens, increase energy efficiency, and conserve natural resources. Our environmental management is closely linked to our corporate policy and the Code of Conduct, which includes comprehensive sustainability measures in the areas of environment, social responsibility, ethics, and compliance.

### Key Areas of Action:

- **Energy Efficiency & Energy Management:** Use of energy-efficient technologies, utilization of waste heat and renewable energies, implementation of measurable energy-saving targets (e.g. replacing fluorescent tubes with energy-saving lighting when defective, use of motion detectors, energy savings through compressed air system regulation, review and modification of settings on technical systems, conducting energy-saving training measures, using compressor exhaust air for heat recovery, energy-efficient building renovations).
- **Resource Conservation & Material Use:** Efficient use of raw materials, minimization of paper consumption, use of recycled materials and reusable packaging.
- **Emissions & Water Protection:** Reduction of air, noise, and greenhouse gas emissions, as well as controlled treatment and discharge of wastewater; implementation of filter systems for air emissions.
- **Safe Handling of Hazardous Substances:** Handling of hazardous substances is carried out in strict compliance with safety regulations, ensuring safety during handling, transport, storage, and disposal of these materials.
- **Waste Reduction & Recycling:** Reintegration into the material cycle through separate collection, licensed disposal, and targeted reduction measures.
- **Biodiversity & Soil Protection:** Promotion of biodiversity and adherence to deforestation-free supply chains in accordance with the EU Deforestation Regulation (EUDR).
- **Environmentally Compliant Procurement:** Consideration of environmental and material regulations (e.g. REACH, RoHS) in supplier selection.
- **Occupational Health & Safety:** Implementation and continuous development of occupational health and safety management to protect the safety and health of employees.

Our environmental policy is an integral part of our quality management system. We promote open communication with employees, business partners, and authorities, and expect all parties involved to act with the same sense of environmental responsibility.
